

## Abstract

A compound represented by the following formula (1) or a salt thereof:

wherein R<sup>1</sup> represents hydrogen atom, a halogen atom, hydroxyl group etc.; R<sup>2</sup> represents hydrogen atom, a halogen atom, a C<sub>1-6</sub> alkyl group, -(C<sub>2-3</sub> alkylene)O(G<sup>1</sup>) (G<sup>1</sup> represents hydrogen atom, or a C<sub>1-6</sub> alkyl group) etc.; R<sup>3</sup> represents a group such as -O-X-C(A<sup>1</sup>)(A<sup>11</sup>)-C(A<sup>2</sup>)(A<sup>21</sup>)-NH-A<sup>3</sup> (A<sup>1</sup>, A<sup>11</sup>, A<sup>2</sup>, A<sup>21</sup> and A<sup>3</sup> represent hydrogen atom, or a C<sub>1-6</sub> alkyl group; X represents propylene group, butylene group etc., and two of groups included in one or more combinations selected from the group consisting of combinations of A<sup>3</sup> and A<sup>2</sup>, A<sup>3</sup> and A<sup>1</sup>, and A<sup>2</sup> and A<sup>1</sup> may be bound via an alkylene moiety to form a 5- or 6-membered ring) etc., which is useful as an active ingredient of a medicament for inhibiting phosphorylation of myosin regulatory light chain.
